

Educational networking tool for collage students

About: This project aims to create a website that allows to students of different collage to get educational learning from each other. This will be achieved by creating a website with two features:

1. Allow users who are in different colleges, yet taking similar courses, to ask and answer questions related to the courses they are taking.
2. Allow users to view information about their own college, which includes class locations, class times, information about professors, and the ability to chat with classmates.

Generally college content management websites are created for each college individually. Searching for homework help on the web generally provides answers not related to academia and generally not related to the methods covered in class. Even though courses are often basically the same across colleges, members of one college have no way of communicating with members of another college, except by using outside websites. So at the doing homework faced many problem. This website will allow college students (and faculty) to get in contact with users from other colleges, and the topics of conversation will be relevant to their current classes.

Users who become members of the site will be able to create their own profile, where they share information about themselves. After they've done this, they can access information about their own college. The distinguishing feature of the site is the ability to communicate with students in similar classes across the nation. Users can indicate which classes they are taking by selecting from the course list that their college uses. The website will then use this information to find questions from similar courses, as well as direct the user's questions to those who would most likely be able to answer it. It does this by keeping track of every course in every school and creating an association between them.
